ABSTRACT

Together with the explosion amount of data, strong demand of diverse as well as personalized data mining, the traditional centralized data mining is no longer suitable. How to execute mass data mining based on cloud computing, and how to provide a high efficiency and high reliable data mining service has become a challenging problem. This talk includes: the practice of data mining based on cloud computing in China; the advantage of data mining based on cloud computing; the challenge problem and future development direction of data mining based on cloud computing.
